

# ***I MUST SCREAM***

DUAL VOLTAGE CONTROLLED GATE MODEL 110

CALIBRATION GUIDE

[imustscream.cc](http://imustscream.cc)

Model 110 can be easily calibrated using Dual Attack Generator or Timing Pulse Generator. Patch output of Dual Attack Generator (minimum envelope times) OR Timing Pulse Generator output to the CV input of Dual Voltage Controlled Gate.

You will hear 'click'. Adjust trimpots on the back to reduce the amount of clicking until you can't hear it.

Do this calibration for the 2 parts of the module.
